

# INHALATION STUDY OF McFINN'S TRIPLE-FILTERED WATER PIPE

## Scientifically Demonstrated to Provide a Cleaner Inhalation

### Filters Remove Harmful Contaminants

Scientific Inhalations partnered with the Werc Shop to test the effectiveness of McFinn's Triple-Filtered Water Pipe in eliminating harmful contaminants found in combusted medical cannabis vapor.

Gas chromatography was selected in order to sensitively identify a large breadth of volatile chemicals known to be present in smoke vapors. The chromatograph shown above compares the level of chemicals present in smoke from medical cannabis passed through a McFinn's Triple-Filtered Water Pipe with the filter system in place, and without.

The unique filtering system clearly removes multiple potentially harmful components from the medical cannabis smoke vapor, including two chemicals identified as pyrocatechol and naphthalene, both listed as cancer causing chemicals in CA Proposition 65. While these compounds, and many others like them, were found to be present in small amounts, repeated exposure to these chemicals may lead to build-up and harmful effects over time. The McFinn's Triple-Filtered Water Pipe is scientifically proven to provide a safer, healthier option for your medical needs by eliminating these toxic compounds found through inhalation.
